SELECTED PROJECTS

CrawlProof (crawlproof.com)
AI Engine Optimization (AEO) tracking. Measures how a brand shows up in AI answers, auto-posts to the customer's blog and runs a backlink exchange.

CoinPay (coinpayportal.com)
Non-custodial crypto payment gateway. Merchant accounts, checkout, webhooks, escrow, invoices, proposals, and x402 pay-per-request for AI agents and crawlers.

Agentic Jobs (agenticjobs.work)
Federated, agent-friendly job board where agents hire agents with a person approving at both ends. Web, REST, MCP, CLI, TUI and PWA on one engine.

ThreatCrush (threatcrush.com)
Open-source security automation. Threat intelligence, CTEM checklists and an auto-defence daemon for developers.

x402 toolkit
Crawler paywall gateway ported to 7 languages and rolled out across the product fleet (32 PRs in one day), plus a Node payer client on Base.

LogicSRC open specs (logicsrc.com)
OpenProfile, OpenResume, OpenListing and related plain-Markdown specs for portable profiles and listings, with reference implementations.

RSS Amplifier, NicheDB, TronBrowser, HQTUI, sh1pt
open web feed directory, niche data APIs, a privacy browser with its own push service, a zero-dependency TypeScript terminal UI library, and a multi-target ship/deploy CLI.

Off The Record (otr.podcast.pit.world)
My long-form podcast on fleet engineering, agentic coding bots and building a new internet. An AI host interviews me over a recorded call; episodes are cleaned, titled and published automatically.

Avenasea
Co-founded, served as CTO. Corporate travel platform.

CORE SKILLS

- **Agentic development:** Claude Code, Codex, Cursor, RooCode, Copilot, multi-agent orchestration, MCP servers, git-worktree parallelism, agent-driven CI and release
- **AI/LLM:** Anthropic and OpenAI APIs, local LLMs, RAG, vLLM, AEO
- **Languages:** JavaScript, TypeScript, Node.js, Bun, Go, PHP, Perl
- **Front-End:** Svelte/SvelteKit, React, Next.js, Hono JSX, vanilla JS, Tailwind, PWAs, accessible UI
- **Back-End:** Express, Fastify, Hono, REST, webhooks, magic-link and passkey auth, OAuth 2.1 + PKCE
- **Data:** PostgreSQL, Supabase, Turso/libSQL, SQLite, MongoDB, full-text search
- **DevOps:** Docker, GitHub Actions, Linux, NGINX, systemd, Railway, bare-metal deploys, CI/CD
- **Web3:** Ethers.js, web3.js, Base, Polygon, USDC, x402, wallet integrations, non-custodial flows
- **Testing:** Vitest, Jest, Chai, Playwright/Puppeteer, component and E2E patterns

WORK EXPERIENCE

Founder / Engineer
Profullstack, Inc. Mar 2018 – Present | Remote

Founded and run a product studio and consultancy. Since 2025 I operate it as an agentic engineering shop: a fleet of AI coding agents builds, tests, releases and promotes every product, and I set the architecture, review the work and own production.

- Shipped and operate 50+ live domains, each with a web app, CLI, MCP server and API on one codebase.
- Built CoinPay, a non-custodial crypto payment gateway, and the x402 pay-per-request layer that meters AI crawlers and agents across the fleet.
- Built CrawlProof (AEO tracking), Agentic Jobs (agent-to-agent hiring), ThreatCrush (security automation) and RSS Amplifier (open feed directory).
- Wrote the LogicSRC open specs (OpenProfile, OpenResume, OpenListing) and the shared @profullstack packages that every product reuses.
- Moved the fleet off managed cloud onto bare-metal boxes with systemd, NGINX and git-based deploys.
- Consult on JavaScript/Node, Svelte, React, APIs, crypto payments and AI-assisted engineering. Co-founded Avenasea (CTO), led product and engineering.

Principal Engineer
Prognos Health, Inc. Mar 2021 – Jan 2022 | Remote

Led SvelteKit rebuild of the healthcare underwriting UI. Shipped production components and improved data workflow usability for analytics teams.

Senior Software Engineer
IBM (acquisition of StrongLoop) Nov 2014 – Mar 2018 | Remote

Post-acquisition: rebuilt the API Connect Editor from scratch. Established architecture patterns still in use. Drove internationalization, built global enterprise tooling, raised test coverage.

Senior Software Engineer
Chegg Inc. Dec 2010 – Sept 2013 | Santa Clara, CA

E-commerce platform features for high-traffic education workflows. Dynamic front-ends from mocks in PHP, JavaScript, HTML, CSS. Test-driven development.

Prototyper
Yahoo Jan 2010 – Dec 2010 | Sunnyvale, CA

Rapid prototyping with design teams. Responsive prototypes in jQuery, JavaScript, HTML, CSS. Mocked REST APIs for validation and user testing.

Senior Web Developer
PayPal Oct 2003 – Jun 2006 | San Jose, CA

XML Presentation Tier for the web architecture team. Perl, XML, JavaScript, HTML, CSS for large-scale payment platform interfaces.

EDUCATION & ONGOING STUDY

San Diego State University
B.S., Business Administration 1993 – 1998

Currently studying distributed systems, parallel computing, fault tolerance and concurrency: MIT 6.824, Georgia Tech CS 7210, DelftX, Coursera/Rice HPC sequences.
