

CORE SKILLS

Languages: JavaScript, Node.js, TypeScript, HTML, CSS, PHP, Perl	Front-End: React, Svelte, SvelteKit, vanilla JavaScript, Tailwind CSS, accessibility, responsive UI
Back-End: Express, Fastify, REST APIs, webhooks, auth systems, background jobs, service-oriented architecture	Data: PostgreSQL, Supabase, MongoDB, JSON/CSV pipelines, data modeling
AI/LLM: Claude Code, OpenAI Codex, ChatGPT, Cursor, RooCode, GitHub Copilot, local LLM tooling, RAG concepts, vLLM planning	DevOps: Docker, GitHub Actions, Ubuntu/Linux, NGINX, pm2, Railway, CI/CD pipelines
Web3/Payments: Ethers.js, web3.js, Polygon, wallet integrations, non-custodial crypto payment flows	Quality: Vitest, Jest, Chai, Karma, Protractor, component testing, E2E-friendly UI patterns

SELECTED PROJECTS

ThreatCrush Open-source security automation and threat-intelligence platform concept for developer-friendly risk detection workflows.	CoinPayPortal Non-custodial crypto payment gateway designed around merchant accounts, checkout flows, webhooks, API-first integration, escrow concepts, reputation, and crypto-native commerce.
Infernet Protocol Decentralized AI inference protocol concept for distributed compute coordination, model routing, vLLM-compatible deployment ideas, and AI workload marketplaces.	Bittorrented Torrent-first streaming and metadata platform.
UGig AI-assisted marketplace connecting skilled engineers and workers with people who need technical help.	

WORK EXPERIENCE

Founder / Software Engineer / Independent Contractor Profullstack, Inc.	Mar 2018 – Present Remote
Founded and operate a software consulting and product studio building client projects, internal SaaS products, AI-assisted developer tools, crypto payment systems, security platforms, and web applications.	
- Use AI-assisted engineering workflows daily for planning, implementation, refactoring, debugging, documentation, and test generation. - Built and launched products across security automation, crypto payments, distributed AI infrastructure, marketplaces, content platforms, browser extensions, and developer tools. - Developed ThreatCrush, CoinPayPortal, and Infernet Protocol as AI-assisted projects spanning cybersecurity, fintech, decentralized AI infrastructure, and API-first product design. - Consulted on JavaScript, Node.js, Svelte, React, REST APIs, blockchain front-end development, wallet integrations, and payment-related systems. - Co-founded and served as CTO for Avenasea.com, contributing to corporate travel product development. - Led creation of husko.money, an NFT project on Polygon mainnet, including front-end development and blockchain integration.	

Principal Engineer

Prognos Health, Inc.

Mar 2021 – Jan 2022 | Remote

Led development of a new underwriting user interface using SvelteKit and vanilla CSS for healthcare data workflows.

- Built production UI components and front-end architecture for healthcare analytics and underwriting products.
- Collaborated across product, engineering, and data teams to improve usability, workflow efficiency, and delivery for healthcare data analytics.
- Contributed to data-driven and AI-assisted workflow concepts for diagnosing anonymous patients using public and healthcare-related data sources.

Senior Software Engineer

IBM

Nov 2014 – Mar 2018 | Remote

Developed features for API Connect Editor after acquisition, improving developer experience for API design and management workflows.

- Created a base application for a product rewrite, helping establish maintainable architecture and streamlined development patterns.
- Built and maintained front-end features for enterprise API tooling used by global customers.
- Conducted UI testing using Protractor, Karma, and Chai to improve code quality and reduce regressions.
- Integrated internationalization and localization features for global users.

Senior Software Engineer

Chegg Inc.

Dec 2010 – Sept 2013 | Santa Clara, CA

Developed and maintained e-commerce platform features for high-traffic education commerce workflows.

- Built dynamic front-end interfaces from design mocks using PHP 5, JavaScript, HTML, and CSS.
- Practiced test-driven development and collaborated with engineering leadership and product teams.

Prototyper

Yahoo

Jan 2010 – Dec 2010 | Sunnyvale, CA

Collaborated with design teams to prototype new product features and user experiences.

- Built responsive prototypes with jQuery, JavaScript, HTML, and CSS for modern browsers.
- Mocked and fetched REST API data to simulate real-world application behavior for design validation and user testing.

Senior Web Developer

PayPal

Oct 2003 – Jun 2006 | San Jose, CA

Developed XML Presentation Tier features for PayPal's web architecture team.

- Used Perl, XML, JavaScript, HTML, and CSS to support large-scale payment platform interfaces.
- Improved web architecture workflows and contributed to systems supporting PayPal's global product surface.

EDUCATION & ONGOING STUDY

San Diego State University

B.S., Business Administration

1993 – 1998

Currently auditing and self-studying distributed systems, parallel computing, cloud infrastructure, fault tolerance, distributed algorithms, concurrency, and high-performance computing through MIT OCW, edX, Coursera, Rice, DelftX, and Georgia Tech materials.

Current coursework includes MIT 6.824 / 6.S840 Distributed Systems; DelftX Modern Distributed Systems; Georgia Tech CS 7210 Distributed Computing; Coursera / Rice Parallel, Concurrent, and Distributed Programming in Java; Georgia Tech High Performance Computing; and Coursera Intro to High-Performance and Parallel Computing.
