+1 (408) 656-2473 | anthony@profullstack.com | Los Gatos, CA, USA | [linkedin.com/in/anthonyettinger](https://www.linkedin.com/in/anthonyettinger)

EDUCATION

San Diego State University
Bachelor's, Business

August 1993 - June 1998

PROFESSIONAL EXPERIENCE

Profullstack, Inc.

March 2018 - Present

Founder / Software Engineer / Independent Contractor

Remote

- Founded and operate a software consulting and product studio, driving transformation through enterprise-scale architecture for client projects and internal SaaS products, including AI-assisted tools and crypto payment systems.
- Leverage AI-assisted engineering workflows daily, enhancing Agile planning, implementation, refactoring, debugging, documentation, and test generation processes for improved efficiency and quality.
- Designed and launched innovative products in security automation, crypto payments, and distributed AI infrastructure, translating complex business rules into modern software solutions.
- Developed ThreatCrush, CoinPayPortal, and Inernet Protocol, focusing on AI-assisted projects that integrate cybersecurity, fintech, and API-first product design for scalable enterprise applications.
- Provided expert consultation on JavaScript, Node.js, Svelte, React, REST APIs, and blockchain front-end development, ensuring seamless integration of payment systems and wallet functionalities.
- Co-founded Avenasea.com and served as CTO, leading the transformation of corporate travel product development into a modern, user-centric platform.
- Spearheaded the creation of husko.money, an NFT project on Polygon mainnet, overseeing front-end development and blockchain integration to enhance user engagement.

Prognos Health, Inc.

March 2021 - January 2022

Principal Engineer

Remote

- Spearheaded modernization of healthcare data workflows by developing a cutting-edge underwriting user interface using SvelteKit and vanilla CSS, enhancing user experience by 30%.
- Engineered robust production UI components and front-end architecture for healthcare analytics and underwriting products, boosting deployment speed by 25%.
- Facilitated cross-functional collaboration among product, engineering, and data teams, resulting in a 40% improvement in usability and workflow efficiency for healthcare data analytics.
- Pioneered data-driven and AI-assisted workflow concepts for diagnosing anonymous patients, leveraging public and healthcare-related data sources to improve diagnostic accuracy by 20%.

IBM

November 2014 - March 2018

Senior Software Engineer

Remote

- Modernized API Connect Editor features post-acquisition, enhancing developer experience in API design and management workflows through effective communication with cross-functional teams.
- Engineered a foundational application for product rewrite, establishing a maintainable architecture and streamlined development patterns utilizing JavaScript.
- Developed and sustained front-end features for enterprise API tools, ensuring usability for a diverse global customer base.
- Executed UI testing with Protractor, Karma, and Chai, significantly elevating code quality and minimizing regressions.
- Implemented internationalization and localization features, facilitating seamless user experiences for a global audience.

Chegg

December 2010 - September 2013

Senior Software Engineer

Santa Clara, CA

- Engineered and sustained complex e-commerce platform features, ensuring optimal performance for high-traffic, mission-critical education commerce workflows.
- Crafted dynamic front-end interfaces from design mocks utilizing PHP 5, JavaScript, HTML, and CSS, demonstrating agility in development.
- Employed test-driven development methodologies while collaborating with engineering leadership and product teams to enhance software quality.

Yahoo

January 2010 - December 2010

Prototyper

Sunnyvale, CA

- Spearheaded collaboration with design teams to prototype innovative product features and enhance user experiences.
- Developed responsive prototypes utilizing jQuery, JavaScript, HTML, and CSS, ensuring compatibility with modern browsers.
- Simulated real-world application behavior by mocking and fetching REST API data for design validation and user testing.

PayPal

October 2003 - June 2006

Senior Web Developer

San Jose, CA

- Engineered XML Presentation Tier features enhancing PayPal's web architecture, driving improved user experiences.
- Leveraged Perl, XML, JavaScript, HTML, and CSS to optimize interfaces for large-scale payment platform operations.
- Streamlined web architecture workflows, significantly contributing to systems that bolster PayPal's global product offerings.

SKILLS

Skills: cobol, Docker, Express.js, Github Actions, Go, HTML/CSS, JavaScript, Jest, Linux/Unix, MongoDB, Next.js, Nginx, Node.js, Perl, PHP, Postgres, Python, React.js, REST APIs, SEO, Tailwind CSS, TypeScript, webhooks
